Medical Disease Risk Report

Generated: 2026-05-05 10:17:33

Patient Profile

- Glucose: 0.36129032258064525
- SkinThickness: 0.14130434782608695
- Insulin: 0.07932692307692309
- BMI: 0.12269938650306725
- DiabetesPedigreeFunction: 0.009393680614859123
- Age: 0.2333333333333333
- Age BMI Interaction: 0.028629856850715688
- BP BMI Interaction: 0.07011393514460985

Risk Summary

Predicted Class: 0

Risk Probability: 9.50% (Low)

Top Contributing Risk Factors

- Glucose: reduces risk (SHAP=-0.6053)
- BMI: reduces risk (SHAP=-0.3792)
- DiabetesPedigreeFunction: reduces risk (SHAP=-0.3507)

Recommended Next Steps

- Maintain current lifestyle and annual health screening.
- Keep balanced diet and regular physical activity.

Cost-Benefit Insight

Early intervention saves approx $190 in avoidable long-term care costs.
