Medical Disease Risk Report

Generated: 2026-04-30 21:41:08

Patient Profile

- Glucose: 0.36129032258064525
- SkinThickness: 0.14130434782608695
- Insulin: 0.07932692307692309
- BMI: 0.1390593047034765
- Age: 0.31666666666666665
- Glucose Insulin Ratio: 4.553873638763974
- Age BMI Interaction: 0.04403544648943422
- BP BMI Interaction: 0.079462459830558

Risk Summary

Predicted Class: 0

Risk Probability: 8.92% (Low)

Top Contributing Risk Factors

- BMI: reduces risk (SHAP=-1.1287)
- Glucose: reduces risk (SHAP=-0.4756)
- BP BMI Interaction: reduces risk (SHAP=-0.3504)

Recommended Next Steps

- Maintain current lifestyle and annual health screening.
- Keep balanced diet and regular physical activity.

Cost-Benefit Insight

Early intervention saves approx $178 in avoidable long-term care costs.
